

SCE1000A

Crawler Crane

100 Tons Lifting Capacity

Quality Changes the World

Max. lifting moment: 380t·m
Max. boom length: 64m
Max. fixed jib combination: 52m+22.5m

The parameters and diagrams in the brochure are only for reference, which are subject to further update in real machine.

Product Specification

Engine

- Model: Cummins QSL9-C325 Diesel engine;
- Type: 4-stroke, water-cooled, vertical in-line 6 cylinders, direct injection, turbo-charger, intercooler, complied with European Non-road Tier V Emission Standard and US EPA Tier F4(f) Emission Standard;
- Displacement: 8.9L;
- Rated power: 242kW/1800rpm;
- Operation power: 242kW/1800rpm;
- Max. Torque: 1526N.m/1400rpm;
- Starter: 24V-6.0kW;
- Radiator: fin type aluminum plate core;
- Air cleaner: Dry type system with main filter element, safety element and resistance indicator;
- Throttle: Grip type hand throttle, electrically-controlled;
- Fuel filter: Replaceable paper element;
- Batteries: Two 12V×165Ah capacity batteries, connected in series;
- Fuel tank capacity: 400L.

Electrical Control System

- Self-developed SYIC-II integrated control system is adopted with higher integration, precise operation and reliable quality;
- Control system consists of power system, engine system, main control system, LMI system, auxiliary system and safety monitoring system. CAN BUS is used for data communication between controller, monitor and the engine;
- Monitor: the working parameters and status are shown on the monitor, such as the engine speed, fuel volume, engine oil pressure, servo pressure, engine working hours, lifting conditions and boom angle.

Hydraulic System

- Main pumps: three open variable displacement piston pumps are adopted to provide oil supply for main actuators of machine;
- Gear pump: two types of gear pump for radiator and control circuit;
- Control: main pump adopts electrically-controlled positive flow control; winch motor adopts limitless adjustable piston motor of variable displacement. The operating components are two cross hydraulic handles, dual one-axis control handle for travel (EU market); or one cross handle plus three one-axis handles, and dual one-axis handles (US and other markets), to control various actuators proportionally;
- Way of cooling: heat exchanger, plate fan core and multi-stage cooling;
- Filter: large flow, high precision filter, with bypass valve and transmitter, which can remind the user to replace the filter element in time;
- Max. pressure of system: 32MPa;
- Main/aux. load hoist, boom hoist and travel system: 32MPa;
- Swing system: 32MPa;
- Control system: 5MPa;
- Hydraulic Tank Capacity:460L.

Product Specification

Main and Aux. Hoist Mechanism

- Main and aux. hoist winches are driven separately by motor via gearbox. Operating winch handle can control the winch to rotate to two directions, which are lifting and lowering of hook. Excellent inching function is equipped on the machine;
- Drums with fold-line grooves can ensure the wire rope reeved in order in multilayers;
- Free fall for main/aux. load hoist is offered as optional.

Main Hoisting Mechanism	Drum diameter	630mm
	Rope speed on the first work layer	0~121m/min
	Wire rope diameter	26mm
	Wire rope length of main hoist	240m
	Rated single line pull	12t
Auxiliary Hoisting Mechanism	Drum diameter	630mm
	Rope speed on the first work layer	0~121m/min
	Wire rope diameter	26mm
	Wire rope length of auxiliary hoist	180m
	Rated single line pull	12t

Boom Hoist Mechanism

- Boom hoist winch is driven separately by motor via gearbox. Operating handle can control the winch to rotate to two directions, which are lifting and lowering of boom;
- Drums with fold-line grooves can ensure the wire rope reeved in order in multilayers.

Boom hoist mechanism	Drum diameter	400mm
	Rope speed on the first work layer	0~59m/min
	Wire rope diameter	20mm
	Wire rope length of boom hoist	140m
	Rated single line pull	7t

Optional 3rd winch mechanism

- Optional 3rd winch mechanism is connected with boom base with pins and driven separately by motor via gearbox. Operating handle can control the winch to rotate to two directions, which are lifting and lowering of hook;
- Drums with fold-line grooves can ensure the wire rope reeved in order in multilayers.

Optional 3rd winch mechanism	Drum diameter	522mm
	Rope speed on the first work layer	0~133m/min
	Wire rope diameter	22mm
	Wire rope length	130m
	Rated single line pull	9t

Swing Mechanism

- Swing brake adopts wet, spring loaded, normally-closed brake, and braking through spring force;
- Swing system has three work modes to accommodate different needs. It is featured in small backlash, steady control, and excellent inching function. It also has free slipping function and swing control on slope to provide smoother braking;
- Swing drive: internal engaged swing drive with 360° swing range, and the max. swing speed is 3.5r/min. The max. drive pressure can reach 32MPa;
- Swing lock: cylinder lock can ensure the upperworks locked securely on four directions after work or during transport; Swing ring: single row ball bearing.

Cab and Control

- Novel operator's cab with fashionable profile, nice interior and large window glass. There are low and high-beam lights, back-view mirror, heater and A/C, radio and other functions. The layout of seat, handles, control buttons are designed with ergonomic principles to make operation more comfortable;
- Cab layout: Integrated 10.4-inch touch screen, programmable smart switches, and man-machine interaction interface are more improved;
- Armrest box: on the left and right armrest box are control handles, electrical switches, emergent stop and ignition switch. The armrest box can be adjusted along with the seat;
- Seat: multi-way and multi-level floating adjustable seat with unload switch;
- A/C: cool and heat air; optimized air channels and vents;
- Multiple cameras can present on the monitor at the same time to realize backing video, real-time monitoring of wire rope on each winch, conditions behind the counterweight and surrounding the machine.

Counterweight

- Counterweight tray and blocks are piled up for easier assembly and transport;
- Rear counterweight is self-assembled, total 31.2t;
- Self-assembled counterweight: tray 9.9t×1, left counterweight block 3.45t×3, and right counterweight block 3.45t × 3, cylinder bracket 0.6×1;
- Carbody counterweight: 5.5t×2 at the front and rear of carbody.

Upperworks

- High-strength steel weld framework, with no torsion or deformation. The parts are laid out in the way that is easier for maintenance and service.

Product Specification

Lowerworks

- Independent travel driving units are adopted for each side of the crawler, to realize straight walking and turning driven by travel motor through gearbox and drive wheel.

Crawler Extension and Retraction

- The crawlers can extend and retract via cylinders. During Work Mode, the crawlers must be extended, and retracted during transport with crawlers on when there is no restrictions.

Crawler Tensioning

- Use the jack to push the guide wheel and insert the shim to adjust crawler tension.

Track Pad

- High-strength alloy cast steel track pad can prolong the service life. They are 850mm wide, and the total amount is 52pcs x 2.

Jack cylinder

- Jack cylinders are provided as standard offering to make jobsite transfer easier.

Self-assembly cylinder

- Self-assembly cylinder is provided as standard offering to help crawlers and carbody counterweight assembly during jobsite transfer.

Operating Equipment

- All chords are high-strength steel tubes, and the boom/jib top sheaves are made of high-strength anti-wearing Nylon material protecting wire rope. The hooks are installed with rolled welded steel sheave. Pendant cables with quick hitch connector that are easy to assemble are adopted.

Boom

- Lattice structure. The chord adopts high-strength structural tube and each section is connected through pins;
- Basic boom: 6.5m boom top + 6.5m boom base;
- Boom insert: 3m x 1, 6m x 2, 9m x 4;
- Boom length: 13m~64m.

Fixed Jib

- Lattice structure. The chord adopts high-strength structural tube and each section is connected through pins;
- Basic boom: 4.5m boom top + 4.5m boom base;
- Boom insert: 4.5m x 3;
- Boom length: 9m~22.5m;
- Longest boom + jib: 52m boom + 22.5m jib.

Extension Jib

- The extension jib is a welded structure connected to the boom tip by pins, used for auxiliary hook;
- Extension jib length: 1.82m.

Hook Block

- 100t hook block, five sheaves;
- 50t hook block, three sheaves;
- 25t hook block, one sheave;
- 13.5t ball hook.

Safety Device

Assembly Mode/Work Mode Switch

- In Assembly Mode, some safety devices are disabled for crane assembly;
- In Work Mode, all safety devices activate to protect the operation.

Emergent Stop

- In emergent situation, this button is pressed down to cut off the power supply of whole machine and all actions stop.

Load Moment Limiter (LML)

- It is an independent computerized safety control system. LML can automatically detect the load weight, work radius and boom angle, and present on the display the rated load, actual load, work radius and boom angle. In normal operation, the LML can make a judgment and cut off automatically if the crane moves towards dangerous direction. It can also perform as a black box to record the lifting information;
- Composition: monitor, angler sensor, force sensor and other electrical components.

Over-hoist Protection of the Main/Auxiliary Hooks

- Over-hoist protection device comprises of limit switch and weight on boom top, which prevents the hook lift up too much. When the hook lifts up to the limit height, the limit switch activates, buzzer on the left control panel sends alarm, and failure indicator light starts to flash, the hook hoisting action is cut off automatically.

Over-release Protection Device of the Main/Auxiliary Winch

- It is comprised of activator in the drum and proximity switch to prevent over release of wire rope. When the rope is paid out close to the last three wraps, the limit switch acts, and the system sends alarm through buzzer and show the alarm on the instrument panel, automatically cutting off the winch action.

Function Lock

- If the function lock level is not in work position, all the other handles won't work, which prevents any mis-operation caused by accidental collision.

Drum Lock

- Hydraulically controlled lock is installed for boom hoist drum, which needs to unlock by switch before operation, in order to prevent mis-operation of handles and ensure safety during non-work time.

Swing Lock

- Swing Lock can lock the machine at four positions, front and back, left and right.

Boom Limit Device

- When the boom elevation angle reaches the maximum angle the buzzer sounds and boom action cut off. This protection is two-stage control ensured by both LML system and travel switch.

Back-stop Device

- Its major components are tubes and spring, in order to buffer the boom backlash and prevent further tipping back.

Boom Angle Indicator

- Pendulum angle indicator is fixed on the side of boom base close to the cab, so as to provide convenience to the operator.

Hook Latch

- The lifting hook is installed with a baffle plate to prevent wire rope from falling off.

Safety Device

Monitoring System

- Remote Monitoring system is a standardized offering to provide functions like GPS locating, GPRS data transfer, machine status inquiry and statistics, operating data monitoring and analysis, remote diagnosis of failures.

Lightning Protection Device

- It is offered as an optional feature, which includes the grounding device that can effectively protect the electric system elements and workers from lightning.

Tri-color Load Indicator

- The load indication light has three colors, green, yellow and red, and the real time load status is presented on the display. When the actual load is smaller than 90% of rated load, the green light is on; when the actual load is larger than 90% and smaller than 100%, the yellow light is on, the alarm light flashes and sends out intermittent sirens; when the actual load reaches 102% of rated load, the red light on, the alarm light flashes and sends out continuous sirens. At this moment, the system will automatically cut off the crane's dangerous operation.

Audio-Visual Alarm

- It flashes once the machine is powered on with electricity, so as to warn people around.

Swing Indicator Light

- The swing indicator light flashes during traveling or swing.

Illuminating Light

- The machine is equipped with, short-beam light in front of machine, front angle adjustable far-beam, lamps in operator's cab, lighting devices for night operation, so as to increase the visibility during work.

Rearview Mirror

- It is installed on the left of the operator's cab for monitoring the rear part of the machine.

Pharos

- Pharos is mounted on the top of boom/jib to indicating the height.

Anemometer

- It is mounted on the top of boom/jib, and displayed on the monitor in the cab.

Electronic Level Gauge

- It displays the tipping angle of crane on the monitor in real time, protecting the machine from dangerous situation.

Operation Release

- If the operator leaves the seat, all control handles will be locked immediately to prevent any mis-operation due to accidental collision.

Engine Power Limit Load Adjustment and Stalling Protection

- The controller monitors the engine power to prevent engine getting stuck and stalling.

Engine Status Monitoring

- The engine status will be presented, such as engine coolant temperature, fuel volume, total work hours, engine oil pressure, engine speed, battery charging, voltage.

Working Radius in H Configuration

Load Chart of H Configuration

- Note:
- 1.The rated load in the load chart is calculated complying with EN 13000;
 - 2.The working radius is the horizontal distance from the load center to the swing center;
 - 3.The actual lifting capacity must subtract the weight of hooks and other riggings from the rated capacity in the load chart.
 - 4.The load value is calculated when the object is hung freely,without considering the influence of wind on the load, ground conditions and slope, operation speed and the influence of any other negative factors over safe operation. Therefore, the operator bears the responsibility of making a judgment and decreasing the load and lowering speed.
 - 5.All ratings are calculated when the machine is parking on firm and level ground with less than 1% gradient.
 6. The load value is calculated with wind speed of 9.8m/s.
 7. More detailed information needs to refer to Operator Manual.
 8. This note is applicable to all the following load charts.

Instructions on H load chart with reduced counterweight

1. Please follow the instructions in the Operator Manual to set properly via Menu Setting – Configuration Setting – Counterweight Selection.
2. Machine rear counterweight is about 23.5t, with rear counterweight tray, two left counterweight blocks, two right counterweight blocks, no carbody counterweight.

Unit: t
